

## **S2 Security & Veristream Offer Seamless Visitor Management Check-In**

*[Users gain new efficiencies with integration of S2 NetBox and Visitor Management Software by Veristream.](#) Streamline important lobby management and access control processes with iVisitor.*

Orlando, Florida ([PRWEB](#)) January 21, 2015 -- S2 Security and Veristream are proud to announce the integration of the S2 NetBox, the 100% browser delivered security management system, with Veristream's online [visitor management](#) system, iVisitor. The integration helps users to gain new efficiencies by creating a seamless, browser-delivered visitor check-in solution for organizations of any size.

The integration of the S2 NetBox® with iVisitor creates a unique no-software solution for access control and visitor management. Using a secure Internet connection, lobby reception users can access iVisitor to check-in visitors, vendors and contractors, thereby automatically programming temporary cards utilizing the S2 NetBox system.

“By integrating access control and visitor management, organizations have better control over who is in their buildings, when, and for what reason,” said Veristream’s Curtis Hrcirik. “The partnership with S2 will not only help organizations to improve security by providing them with a complete, integrated IP-based physical security system, but it will also help them to realize greater efficiencies by streamlining important lobby management and visitor control processes.”

Veristream's iVisitor service is a secure online, web based system that allows for real-time communication of authorized visitors, vendors and deliveries between employees and building security and safety staff. The iVisitor service is accessed via an Internet connected computer, tablet or smartphone by an unlimited number of authorized users. There is no locally installed software, thus no dedicated hardware or IT support is required. The iVisitor service is highly scalable, extremely efficient, completely on-line and available 24x7 worldwide to customers small, large and geographically dispersed.

### About Veristream

Veristream, headquartered in Orlando, Florida, is a global SaaS Visitor management security technology provider focused on serving organizations with the most stringent security requirements.
